

Stone Cleaning & Care Guide

Each Nôsa Stone Resin product is manufactured using our vigorously tested process, which has been trialed and perfected over many years.

Matt Finish

We advise routinely cleaning the goods with warm, soapy water. The product should ideally be cleaned immediately after use, simply rinsing the surface with water and then drying it gently with a soft cloth. You may use cleaning products, but please carefully read the instructions and advice on the packaging.

We advise applying a cream cleaner like CIF or AJAX to rid tough stains. We also advise you to deep clean the goods once a month using the sanding pads that are provided in the box. Fine scratches and any lingering stains will be eliminated by using the sanding pad. You may use warm, soapy water when using the pad. If you need a new sanding pad or have misplaced yours, you will be able to purchase a replacement at a local DIY store.

Polished Finish

We advise routinely cleaning the goods with warm, soapy water. The product should ideally be cleaned immediately after use, simply rinsing the surface with water and then drying it gently with a soft cloth. You may use cleaning products, but please carefully read the instructions and advice on the packaging. We advise utilising a polishing kit, which can be purchased at most large DIY stores, for stains that are difficult to remove.

Water Temperature Guidance

If the product is very cold, allow it to reach room temperature before use. Begin filling with lukewarm water and introduce hotter water gradually. Do not pour boiling water directly onto the surface or rapidly alternate between extremely hot and cold water.
